Maxwell's equations are a set of partial differential equations that, together with the Lorentz force law, form the foundation of classical electromagnetism, classical optics, and electric circuits. The equations provide a mathematical model for electric, optical and radio technologies, such as power generation, electric motors, wireless communication, lenses, radar etc. Maxwell's equations ...

Classical Mechanics [Herbert Goldstein, Charles P. Poole & John Safko] on Amazon.com. \*FREE\* shipping on qualifying offers. For 30 years, this classic text has been the acknowledged standard in classical mechanics courses. Classical Mechanics enables students to make connections between classical and modern physics an indispensable part of a physicist's education.

This book is great for learning the topic for the first time, and even better once you're looking for a good reference at a later time. It goes very deeply into the physics and philosophy of classical mechanics.

The physical constant  $\epsilon_0$  (pronounced as "epsilon nought" or "epsilon zero"), commonly called the vacuum permittivity, permittivity of free space or electric constant or the distributed capacitance of the vacuum, is an ideal, (baseline) physical constant, which is the value of the absolute dielectric permittivity of classical vacuum. It has an exactly defined value

In fisica, in particolare nell'elettromagnetismo, le equazioni di Maxwell, elaborate da James Clerk Maxwell, sono un sistema di equazioni differenziali alle derivate parziali lineari accoppiate (due vettoriali e due scalari, per un totale di otto equazioni scalari) che, insieme alla forza di Lorentz, costituiscono le leggi fondamentali che governano l'interazione elettromagnetica.
