

specific heat of some pdf

Heat capacity or thermal capacity is a measurable physical quantity equal to the ratio of the heat added to (or removed from) an object to the resulting temperature change. The unit of heat capacity is joule per kelvin, or kilogram metre squared per kelvin second squared $\hat{\leftarrow} \hat{\leftarrow}$ in the International System of Units ($\hat{\leftarrow}$).The dimensional form is $L^2 M T^{-2} \hat{\leftarrow}^{-1}$

Heat-related illnesses are preventable. Learn the symptoms and what to do if you or a loved one shows signs of having a heat-related illness. Text Equivalent

Warning Signs and Symptoms of Heat-Related Illness

Latent heat is thermal energy released or absorbed, by a body or a thermodynamic system, during a constant-temperature process $\hat{\leftarrow}$ usually a first-order phase transition.. Latent heat can be understood as heat energy in hidden form which is supplied or extracted to change the state of a substance without changing its temperature.

Actions for High Risk Conditions: Heat Index is 103 degrees F to 115 degrees F. As the heat index rises above 103°F, there is a high risk for heat-related illness, so additional measures to protect workers are needed. Increase rest periods and designate a knowledgeable person (well-informed on heat-related illness) at the worksite to determine appropriate work/rest schedules.
