

statistical theory and modelling pdf

A statistical model is a mathematical model that embodies a set of statistical assumptions concerning the generation of some sample data and similar data from a larger population. A statistical model represents, often in considerably idealized form, the data-generating process. The assumptions embodied by a statistical model describe a set of probability distributions, some of which are assumed ...

Statistical mechanics is one of the pillars of modern physics. It is necessary for the fundamental study of any physical system that has a large number of degrees of freedom. The approach is based on statistical methods, probability theory and the microscopic physical laws. It can be used to explain the thermodynamic behaviour of large systems. This branch of statistical mechanics, which ...

where $\ln \cdot$ is the natural logarithm. The entropy is non-negative and is at most the natural log of the number of elements in X . Entropy is a fundamental concept in information theory: in the paper that originated that field, Shannon (1948) described entropy as "a measure of how much 'choice' is involved in the selection of an event". Thus a distribution with higher entropy involves ...
