The relationship between biology and sexual orientation is a subject of research. While scientists do not know the exact cause of sexual orientation, they theorize that a combination of genetic, hormonal, and social factors determine it. Hypotheses for the impact of the post-natal social environment on sexual orientation, however, are weak, especially for males.

ISOCARP paper - Evolution of Industrial Landscape in

The evolution of the peppered moth is an evolutionary instance of directional colour change in the moth population as a consequence of air pollution during the Industrial Revolution. The frequency of dark-coloured moths increased at that time, an example of industrial melanism. Later, when pollution was reduced, the light-coloured form again predominated.

The evolution of the peppered moth has been studied in detail over the last 150 years. At first, almost all of the moths were light coloured. This gave them camouflage against the light-coloured trees and lichens where they rested during the day. As pollution increased during the Industrial Revolution in England, many of the lichens died out. The trees became blackened by soot, and most of the ...

Human evolution is a rapidly-changing field, with the regular discovery of new fossil material leading scientists to constantly reconsider evolutionary relationships. This section is an overview of current knowledge of human ancestors, but also presents information on trends in human evolution and the use of DNA technology to examine our past history.
