Mattering in a dementia care home The Butterfly Approach
Alzheimer’s disease accounts for 50% to 70% of cases of dementia. The most common symptoms of Alzheimer’s disease are short-term memory loss and word-finding difficulties. People with Alzheimer’s disease also have trouble with visual-spatial areas (for example, they may begin to get lost often), reasoning, judgment, and insight.

Dementia - Wikipedia
This guideline covers diagnosing and managing dementia (including Alzheimer’s disease). It aims to improve care by making recommendations on training staff and helping carers to support people living with dementia.

Dementia: assessment, management and support for people
What is already known about the topic? Person-centred care is widely recognised as the ideal approach for caring for people with dementia. There is a high prevalence of co-morbid mental health problems among older adults admitted to acute hospitals.

The challenges of achieving person-centred care in acute
By Brianan Jones Bachelor of Public Health, University of Canberra. An estimated 322,000 Australians had dementia in 2013. Based on projections of the country’s population, ageing and growth, the number of people with dementia will reach almost 400,000 by 2020 and around 900,000 by 2050 (AIHW 2013).

Dementia can have a very big effect on the person affected. They may fear their loss of memory and thinking skills, but they also fear the loss of who they are. They may also find they don't understand what's going on or why they feel they're not in control of what's happening around them or to them ...
